Interior Side

Benefits and selection criteria

- Helps hold shattered glass together should a break occur
- Helps slow down entry through glass
- Pressure-sensitive adhesive has a low visual distortion that provides optical clarity
- Most often used to help hold shattered glass in place in the event of a windstorm or blast
- Also can be used for added protection during human impact, an earthquake or in the event of spontaneous tempered glass breakage
- Provides extreme reduction of heat and glare with daytime privacy
- Shields >99% of UV radiation, helping to reduce fading of valuables, fabrics and furnishings**
- Please see LLumar.com for recommendations and test results for specific glass and frame types

Manufacturer's
Limited Warranty*

The solar performance data reported for LLumar architectural window films was captured using the National Fenestration Rating Council's (NFRC) standard guidelines for window film solar performance measurement. All safety and performance data has been measured in accordance with ASTM, ASHRAE, AIMCAL and ANSI standards using NFRC methodology with Lawrence Berkeley National Lab's WINDOW Fenestration Analysis Software. Reported values are taken from representative product samples and are subject to normal manufacturing variances. Actual performance will vary based on a number of factors, including glass type and properties.
